

a Applied bias: trapping during conduction

applied V

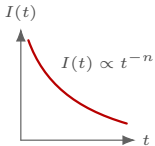

disordered sulfur-polymer film

sign-agnostic carrier
repeated trapping

current decays

$I \downarrow \Rightarrow R \uparrow$

qualitative CvS decay

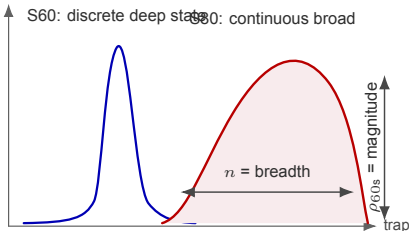

b Trap-energy distribution $g(E)$

sulfur / disorder $\uparrow$: discrete $\longrightarrow$ continuous broad

$g(E)$

S60: discrete deep states

S80: continuous broad

broader $g(E) \Rightarrow$ larger $n \Rightarrow$ slower decay $\Rightarrow$ increasing R
